## Corrigendum

### Complementary roles of IRS-1 and IRS-2 in the hepatic regulation of metabolism

Cullen M. Taniguchi, Kohjiro Ueki, and C. Ronald Kahn

Original citation: *J. Clin. Invest.* **115**:718–727 (2005). doi:10.1172/JCI200523187.

Citation for this corrigendum: *J. Clin. Invest.* **115**:1388 (2005). doi:10.1172/JCI200523187C1.

Due to an error in manuscript preparation, an incorrect shRNA sequence for IRS2 was published. The correct hairpin sequence is a 19-nt stretch beginning from nt 703 of the published IRS2 cDNA sequence (XM\_357863). The oligonucleotides cloned into the U6 construct for the IRS2U6 adenovirus are as follows: tcgagGTGACGCTGCAGCTTATGAttcaagagaTCATAAGCTGCAGCGTCACttttt (forward) and cttagAAAAAGTGACGCTGCAGCTTATGAtctcttgaaTCATAAGCTGCAGCGTCACc (reverse). In addition, the shRNA cassettes were cloned into the adenoviral cosmid pAxcwit, which lacks a promoter, and not the cosmid pAxCawtit, as published..

The authors regret this error.

Citation for this corrigendum: *J. Clin. Invest.* **115**:1390 (2005). doi:10.1172/JCI200315543C1.

During the preparation of this manuscript, errors were introduced into the Methods section, the legend of Figure 9, the corresponding text in the Results section, and the Acknowledgments.

The next to last sentence of Methods should be corrected to read:

“All in vitro and in vivo experiments were repeated at least three times except for the experiments reported in Figures 9b and 9c, which were repeated twice.”

The next to last sentence in the legend to Figure 9 was incorrect. This sentence should read:

“(d and e) After culturing with 1 mM ascorbic acid-2-phosphate for 4 weeks, noggin and BMP-4 expression in bone marrow cell cultures of young and old mice (C57BL/6J) was analyzed by a combination of semiquantitative and real-time RT-PCR, while expression in SAM-R1 (R1) or SAM-P6 (P6) mice was analyzed by semiquantitative RT-PCR.”

The fourth and second sentences before the end of the Results section were also incorrect. These sentences should read:

“In parallel, noggin mRNA levels in bone marrow cells isolated from SAM-P6 mice, measured by semiquantitative RT-PCR, were also significantly elevated (Figure 9d).” “Similar results were obtained using a combination of semiquantitative RT-PCR and real-time RT-PCR with bone marrow cell cultures isolated from aged 20-month-old C57BL/6 mice compared with 4-month-old adult mice (Figure 9e).”

The Acknowledgments should be corrected to read:

“This work was supported by Veterans Administration Merit Review Grants to E. Abe and M. Zaidi and by NIH grant AG-14197-08 to M. Zaidi.”

The authors regret these errors.
